

Metylprednisolon acetat 40mg/ml (Depot –Medrol)

Prikktest utføres med 40 mg/ml.

Intrakutantest utføres med 1/10 fortynning og ufortynnet.

Fortynning: 0.5 ml Metylprednisolon acetat 40mg/ml (dvs 20mg) tilsettes 4.5 ml Nacl. Dette gir en konsentrasjon på 4 mg/ml (1/10 fortynning)

Intrakutant test starter med 4 mg/ml.

Hvis negativ går man videre med ufortynnet dvs 40 mg/ml
