

Betametason 6 mg/ml (Celeston Chronodose)

Prikktest utføres med 6mg/ml.

Intrakutantest utføres med 1/10 fortynning og ufortynnet.

Fortynning: 0.5 ml Betametason 6mg/ml (dvs 3mg) tilsettes 4.5 ml NaCl. Dette gir en konsentrasjon på 0.6mg/ml (1/10 fortynning)

Intrakutant test starter med 0.6mg/ml.

Hvis negativ går man videre med ufortynnet dvs 6mg/ml
